

Introducing Ezidocs

Control document creation to increase efficiency and quality

The opportunity

Ezidocs enables organisations to increase efficiency and quality by controlling how their important documents are created. Our web-to-print document solutions reduce costs and improve business outcomes.

Lower cost

- **Elimination of non-conformance:** rework, enquiry, errors in content, lost sales, lost documents, and consequential commercial risk.
- **Increased productivity:** automation of administrative tasks and workflow, elimination of manual word-processing and formatting, reduction in review and QA requirements, automation of versioning, reduced training, systems integration for data integrity, tracking and management reporting, and increased team unity.

Better outcomes

- **Better quality process:** fast document turnaround, assured content accuracy and completeness, and better knowledge capture.
- **Better quality output:** increased professionalism, consistency, and personalisation in the document content and its look and feel.

Our solution

End to end service

We offer a complete service suite including copy and design, business analysis, tailored development, hosting and support. Specific solutions are customised for each client according to their requirements and implementations are treated as change projects.

Unique proposition

The Ezidocs system provides centralised control of content and usage, workflow and activity visibility to monitor success and ensure continued improvement. User interfaces and workflow are specifically intuitive.

Our business

Boutique

We are a NZ owned and operated business, focussing on larger enterprises in sales/marketing and procurement since 2002. We work with a small number of leading brands to manage growth within our service promise.

Our key people have senior experience in marketing, sales and technology management and consulting in the banking, logistics, software, communications and public sectors.

Track record

Our clients have demonstrated improvements in customer relationships, revenues and productivity with Ezidocs.
